

Password security Questions

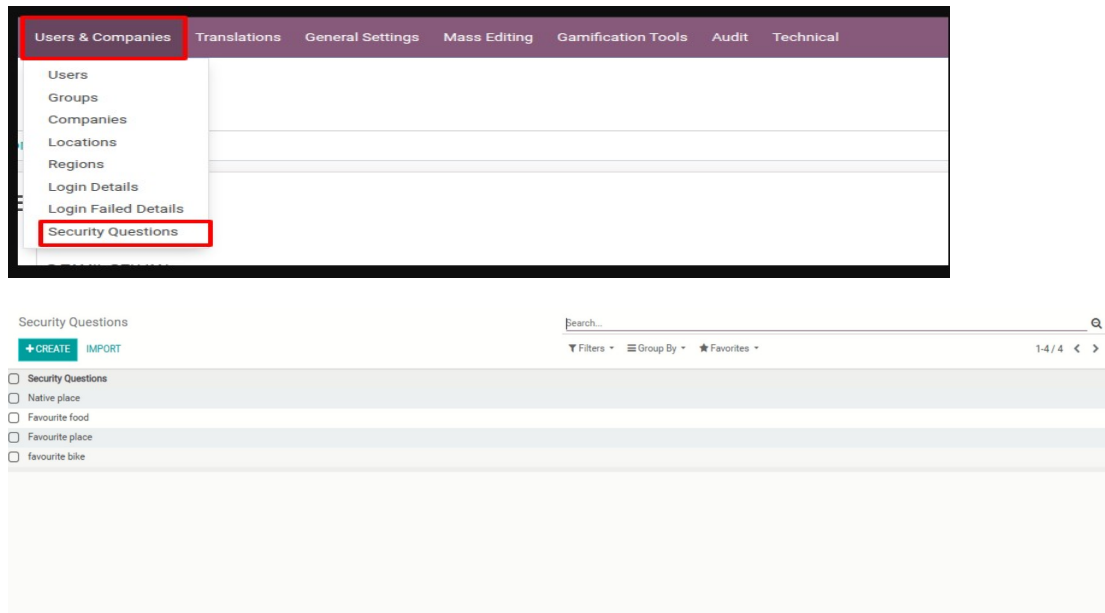

Configuration and Settings

- **Notification page :**

In the screenshot below, it shows that when the Active Login Info option is enabled, a text box appears to display the notification dynamically.

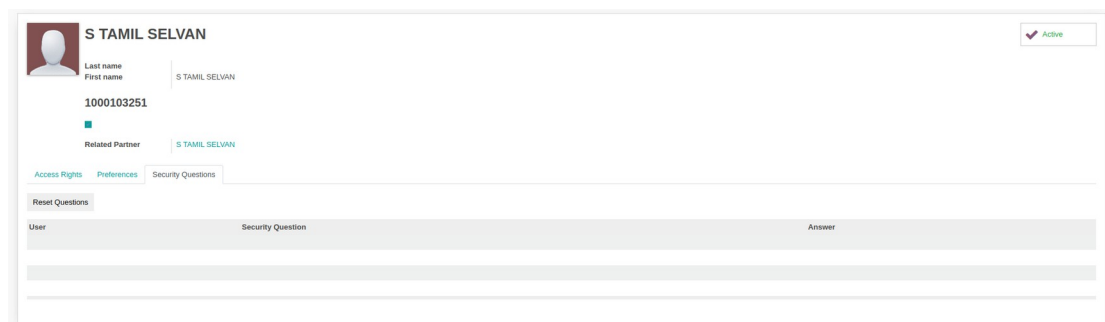

- **Security Questions configuration:**

As shown above, you can create a security question, which will be available in the Security Question form for selection

Password Security Workflow :

1 . Updation of the security Questions to existing user

If an existing user does not have any security questions, and their username and password are correct at the time of login, the security question form will open as shown below.

S TAMIL SELVAN	Favorite pet	dog

2. For New Join employee's:

As discussed with the HR team, new joiners will use their UIN as both the username and password for login. If both are the same, the security question form will open for them to fill out, as shown above.

Your Answer

 Save Security Questions

After completing the password security questions, you will be able to log in to Odoo successfully.

3. Forgot Password steps:

When the "Forgot Password" button is clicked, a UIN entry form will appear. Based on the entered UIN, the system will check and display the user's security questions. If the user does not have any security questions set up, or if they have forgotten the answers, and also cannot remember their password, they must contact the HR team for security reasons.
